

Cartoon On AI

Reference Link: <http://stevehealy.org/blog/?tag=movies>.

The man wondering that what this server is trying to say, basically the rack is the collections of servers where the data is stored. Similarly, there will be many racks in data centers where they will have servers. The concept is servers are the small portion of it can be a small device(core) where data send and retrieve operations are carried. To save space they place some set of servers inside the rack so, "DOES THIS RACK MAKE ME LOOK FAT" (all servers which contain information placed inside the rack) This is what we have to think. Basically, Humans are replaced by Artificial Intelligence. It is that AI over thinks and taking

over man. Mean While Humans take care of this racks the services and other operations. Now AI making all those operations So, humans are worried like what will be the future. In the above picture, SkyNet is a fictional artificial intelligence system.

"The day SkyNet Becomes Self-Aware" is an artificial intelligence system. SkyNet is a fictional character name In the movie Terminator. In the movie they trying to say that SkyNet taking over all the humans when it becomes a self-aware system man tries to deactivate it. But in the movie, they say it becomes aware of judgment day. where the future is the SkyNet system.

This what happening today the Artificial intelligence system taking over all humans. The system is made by man itself so, it is easy to solve a problem. But now a day's AI is the system they made man has a useless piece and the future will be AI. This is what the picture trying to say.

"DOES THIS RACK MAKE ME LOOK FAT", " THE DAY SKYNET BECOMES SELF-AWARE". since all servers inside the rack, make a rack to look fat and bigger once AI is introduced it takes over all the operations. Once the AI is future there is no work for humans And all the activities are taken By the Intelligence system So there will be no racks Nothing everything done automatically.
